Global AIDS Treatment and Prevention Impossible Without More Health Workers

Dear _____

Improvements in global health, including in the fight against AIDS, cannot be won without more health workers. In sub-Saharan Africa alone, more than one million additional health workers are needed to save many millions of people suffering and dying from AIDS and other preventable and treatable diseases. The US and the rest of the global community have committed to achieving universal access to HIV/AIDS treatment and prevention by 2010. But without bold action to overcome the health worker shortage, the world will fall fatally short on this promise.

As a constituent, I respectfully urge you to make global health a priority for the 110th Congress and to support robust new programs that are needed to provide improved supervision, safe healthcare for patients and providers, living wages, incentives to enable health workers to serve in rural areas, reliable supplies of drugs and functional equipment.

Sincerely,
